

VS Code Python Setup Check

Sep 23, 2026 · @TechBros

Summary

Python 3.14 (64-bit) is installed on this Windows PC, and VS Code detects it. The Python extensions are installed and active now that Restricted Mode is off. I checked by viewing VS Code on screen. I couldn't type into VS Code, so I didn't run `python --version`.

Python extensions

VS Code has 25 extensions installed. These are the ones for Python:

Extension	Publisher	What it does
Python	Microsoft	Python language support
Pylance	Microsoft	Code completion and error checking
Python Debugger	Microsoft	Debugging Python code
Python Environments	Microsoft	Finding and managing interpreters
Jupyter (and related)	Microsoft	Notebook support

Python interpreters found

The Python panel lists these under **Environment Managers → Global**:

- **Python 3.14 (64-bit)**: the one VS Code is using
- **Python 3.14.7.final.0**
- **Python 3.14.6.final.0**

The extra entries may be more than one copy of Python, or the same install listed twice. Either way, 3.14 is ready to use. I didn't expand the venv, PyEnv, Pipenv, Poetry or Conda groups.

Where to find each option

What	Where in VS Code
Restricted Mode	Blue shield button at the bottom-left of the status bar. Click it, then choose Trust. Only trust folders you know are safe.
Extensions	Four-squares icon on the left bar, or Ctrl + Shift +

What	Where in VS Code
	X
Restart Extensions	Blue button at the top of the Extensions panel
Python panel (interpreters)	Python logo on the left bar
Terminal	Ctrl + ` (backtick, left of 1), or View → Terminal
VS Code update	Blue Update button at the top right, or the gear icon at the bottom left

Next steps

- ☐ Click **Update** (top right) to install the latest VS Code
- ☐ Click **Restart Extensions** if the banner still shows
- ☐ Open the terminal and run `python --version` to confirm 3.14
- ☐ Start coding: **New File...** → **Python File**, write code, then press ► Run (top right)
